

# Green Events

## Problem

- Traditionally, events produce a lot of waste.
- Can be expensive to hold an event with the cost of regular supplies, on top of other expenses.
- Does not cater to the recent trend and need to act towards improving the environment and creating less waste.

## Solution

- Offer consulting services on ways to hold environmentally friendly events, that cater to people of all ages, and at any event.
- Provide education about alternative products to use when planning an event (big or small), that are safer for the environment and could possibly lower the costs.
